DETAILED ACTION

Election/Restrictions

1. Claims 10-21 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 21 December 2005.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claim 3 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification is only enabling for *electromagnetic* actuators. Please refer to pages 7 and 8 of the pending specification..

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Heynacher, 4,606,151. Please refer to figures 1 and 3b and their descriptions. Please note that without further limiting structure, the apparatus disclosed by '151 is capable of being used as a chemical mechanical planarization polishing apparatus, and support 1 is capable of holding a wafer. Regarding claim 4, the controller of '151 is "arranged" to determine the forces of the actuators on the pad, in that the controller is a computer that is capable of determining forces based on any criteria desired. Applicant may overcome the rejection of claims 4-6 under 35 USC 102(b) by expressly claiming the structure that determines the forces.

6. Claims 1-3 and 7-8 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Kistler et al, US 00607425B1. Please refer to figures 7 and 8 and their descriptions.

Claim Rejections - 35 USC § 103

7. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

8. Claim 9 is rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Kistler et al US, US 00607425B1. Claim 9 is a "product-by-process" claim. MPEP 2113 states in part:

"[E]ven though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985)

The use of the apparatus of claim 1 results in a wafer having a planarized surface. '425 discloses a wafer having a planarized surface.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Other similar pressure applying devices are cited of interest.
